

COVID-19 vaccines from community pharmacy

This table outlines the specific vaccines and age groups that are approved for COVID-19 vaccination in pharmacies or by pharmacists under each state/territory's legislation and regulations. The COVID-19 vaccination program rollout is being carried out in phases, with varying degrees of pharmacy participation across different jurisdictions. Multiple brands of COVID-19 vaccines are registered in Australia. Age restrictions and access to vaccination in pharmacies may differ by brand of COVID-19 vaccine in different jurisdictions. These may also change over time with changing local epidemiology (such as outbreak) within a jurisdiction. Because it is a fast-changing space, refer to the current protocol or operational guidance of your jurisdiction for the most current details.

Availability of COVID-19 vaccines in individual pharmacies depends on supply as the COVID-19 vaccination program rollout progresses. Check with your pharmacy for details. Check if you are now eligible for COVID-19 vaccination using the Australian Government Department of Health [COVID-19 Vaccine Eligibility Checker](#).

State/Territory	Which COVID-19 vaccines can be administered by a pharmacist, if specified,* and who can receive the vaccine?	Notes	Link to jurisdictional standards and regulations
Australian Capital Territory	COVID-19 vaccines approved or provisionally approved by the Therapeutic Goods Administration (TGA) and for the age they are registered for.
